
Project: Disaster Recovery

Platform(s): White Box Windows 2000 Small Business Server

Project Summary

Upon complete Disaster Recovery Plan Discovery, Infitech found Customer had a disaster recovery plan that was outdated and no longer supported all of their assets and various data types. Infitech installed and configured Veritas Backup Exec with Exchange Agent, along with a HP Ultrium LTO 100/200GB Tape Drive, a more robust backup software application along with a more reliable hardware device. This upgrade allows Customer to perform a complete backup of their data in a single location for easy access and restoration in the event of the next data problem. Infitech setup a 4 week tape rotation. 2 weeks are kept on site at all times with the other two taken off site and kept in a fire-safe box.

Key Features

- Veritas Backup Exec software with Exchange Agent to allow message level disaster recovery
- HP Ultrium LTO tape drive, allowing 100GB uncompressed, 200GB compressed data backup
- 20 tapes, providing a 4 week rotation of data kept for handy data recovery
- Reduced backup time from 28 hours to 13 hours with 4 week incremented backup points of recovery
